Batch - 3

Experiment 12

Create Run Ansible Playbooks

Steps

1. Repeat the steps in Experiment 11 to create the initial setup
2. Test adhoc commands

```
[ansible@ip-172-31-11-127 ~]$ ansible upes --list-hosts

hosts (1):
  172.31.5.83
[ansible@ip-172-31-11-127 ~]$
[ansible@ip-172-31-11-127 ~]$
```

3. Install Apache server on node server using adhoc command

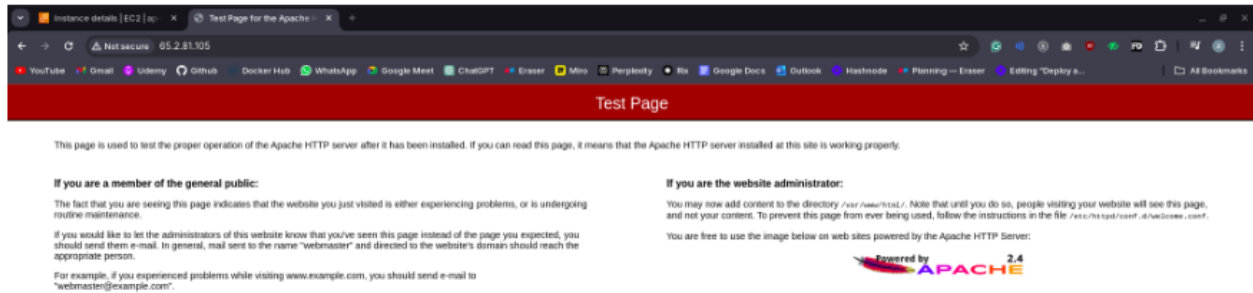

```
[ansiblenode@ip-172-31-5-83 ~]$ which httpd
/usr/bin/which: no httpd in (/usr/local/bin:/usr/bin:/usr/local/sbin:/usr/sbin:/home/ansiblenode/.local/bin:/home/ansiblenode/bin)
[ansiblenode@ip-172-31-5-83 ~]$
```

```
[ansible@ip-172-31-11-127 .ssh]$ ansible upes --list-hosts
hosts (1):
  172.31.5.83
[ansible@ip-172-31-11-127 .ssh]$ ansible upes -a "sudo yum install httpd -y"
[WARNING]: Consider using 'become', 'become_method', and 'become_user' rather than running sudo
[WARNING]: Platform linux on host 172.31.5.83 is using the discovered Python interpreter at /usr/bin/python, but
future installation of another Python interpreter could change this. See
https://docs.ansible.com/ansible/2.9/reference_appendices/interpreter_discovery.html for more information.
172.31.5.83 | CHANGED | rc=0 >>
Loaded plugins: extras_suggestions, langpacks, priorities, update-motd
Resolving Dependencies
--> Running transaction check
--> Package httpd.x86_64 0:2.4.58-1.amzn2 will be installed
--> Processing Dependency: httpd-filesystem = 2.4.58-1.amzn2 for package: httpd-2.4.58-1.amzn2.x86_64
--> Processing Dependency: httpd-tools = 2.4.58-1.amzn2 for package: httpd-2.4.58-1.amzn2.x86_64

--> Finished Dependency Resolution
```

4. Start the httpd service using ansible

```
[ansible@ip-172-31-11-127 .ssh]$ ansibleupes -a "sudo systemctl start httpd"
[WARNING]: Consider using 'become', 'become_method', and 'become_user' rather than running sudo
[WARNING]: Platform linux on host 172.31.5.83 is using the discovered Python interpreter at /usr/bin/python, but
future installation of another Python interpreter could change this. See
https://docs.ansible.com/ansible/2.9/reference_appendices/interpreter_discovery.html for more information.
172.31.5.83 | CHANGED | rc=0 >>

[ansible@ip-172-31-11-127 .ssh]$
```

5. Remove ansible and then reinstall using ansible playbook

```
[ansible@ip-172-31-11-127 .ssh]$ ansibleupes -a "sudo yum remove httpd -y"
[WARNING]: Consider using 'become', 'become_method', and 'become_user' rather than running sudo
[WARNING]: Platform linux on host 172.31.5.83 is using the discovered Python interpreter at /usr/bin/python, but
future installation of another Python interpreter could change this. See
https://docs.ansible.com/ansible/2.9/reference_appendices/interpreter_discovery.html for more information.
